Online Banking Website

Language used:

1. HTML
2. CSS
3. JavaScript

In this project we are going to create an Online Banking Website using basic HTML, CSS and JavaScript.

We have planned and going to create as per the design given by the instructor.

Which include:-

❖ Home page which will provide all the necessary views. And it includes the link to the various linked pages (login / signup page, services, fixed deposit, e-services, account details, about us).

❖ Top bars which includes the link to every single linked page.

❖ We are going to provide services like Personal internet banking, Corporate banking, Merchant business, Online tax.

❖ Payment transfer: - International transfer, National transfer, Bill payment.

❖ My Account page contain: - Account No. , Bank / Branch. IFSC Code.

❖ ABOUT US page which shows the details of our contacts and our headquarters.

Concept:-

- ❖ We have used the concept of HTML Programming like
  - o Hyperlink projection.
- ❖ Use of different tags to make it more visually better like font, table, listing, hyperlink, styling, etc.
- ❖ Use of:-
  - o Combo Box
  - o Search Box
  - o Button
  - o Text Field
  - o Label
  - o Fieldset
  - o Legend

This project is basically a online banking website where one can create his/hers bank account, use the same account for various banking services.

All designing and programming is done by us only.
All the members have their role in creating this website.
